**LED Leads the Way**  
The LED globe has revolutionized torches and lighting. LED bulbs are smaller, brighter and longer lasting than their traditional filament bulb equivalents. Best of all, they use less power for a given light output. This has given us a whole new range of head torches, hand torches and lanterns that are bright, rugged and use less power. It's also made rechargeable lighting, both solar and hand wound, much more practical! Check out the huge range of great value LED torches at Aussie Disposals.

# LED LENSER

LED LENSER

## WATTS VS LUMENS

Lumens = Standard to measure light output

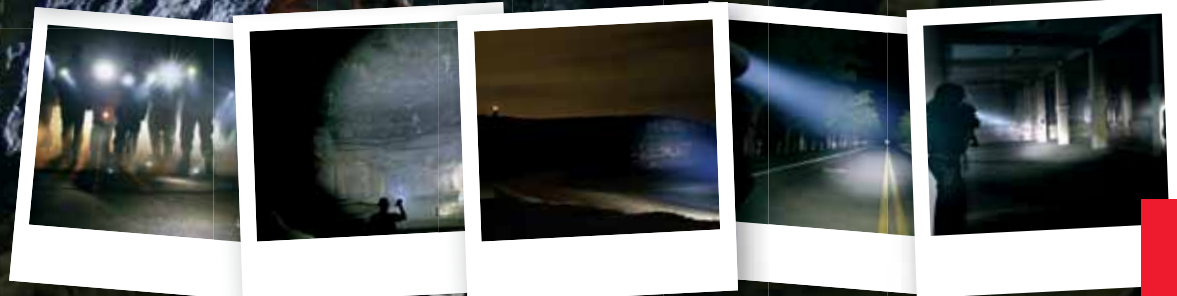

Watts = Measurement of electricity

### Example

3W LED Chip

This means the chip is capable of producing 3 Watts of power as electricity - not brightness of light.

\* Watt electrical is a term that refers to power produced as electricity.
